OSZ Informations- und Medizintechnik

- Advanced courses: Computer Science and English

PROJECTS

Personal Nextcloud Server (*Raspberry Pi, Nextcloud, Cloudflare*) Independently set up a Nextcloud server on separate hardware (Raspberry Pi) with a self-purchased domain, secured via Cloudflare, including DNS management, reverse-proxy configuration, and SSL/TLS hardening for additional security.

Expense Configurator for Projektron BCS (*Java, JavaFX, Maven, JUnit/TestFX*) Desktop application for Projektron GmbH for managing CSV-based expense configurations, developed by a six-person team as part of the FU Berlin software project and shipped as a Windows installer. As Backend Architect, responsible for table structure, undo/redo, multi-tab management, performance, and crash safety.

Music Player (*Java, SQL*) A music player GUI that retrieves songs from a given database.

Technical Learning Repository A collection of best practices, code examples, and notes on various programming languages, Linux, venv, and web development. Continuously expanded. (<https://git.imp.fu-berlin.de/abdilkarib03/propra.git>)

2D Pixel Game (*Java, SQL*) A 2D pixel game featuring a user-controllable character that can interact with the environment. (https://bakir_abdil@bitbucket.org/bakir_abdil/little-adventure.git)

Wordle Solver (*Python*) A tool for finding matching words for the game Wordle. Through a graphical user interface (GUI), the user enters letters that are already known; an algorithm then filters all words that match the given criteria.
